

FULL STACK DEVELOPMENT

SUMMARY

TODAY COVERED TOPICS:-

- ✓ String.
- ✓ String buffer.

STRING:-

- A string is sequence of characters used to store text such as name ,address or any messages.
- In java a string object is immutable,which means its value cannot be changed after it is created.

SYNTAX:-

String str ="Hello";

STRING BUFFER:-

- StringBuffer is class used to store and modify strings.
- It is mutable,meaning its content can be changed without creating a new object.
- It is thread-safe because its methods are synchronized.

SYNTAX:-

StringBuffer sb=new

Stringbuffer("Hello");
